(54) Title: PLANTS HAVING INCREASED YIELD AND METHOD FOR MAKING THE SAME

(57) Abstract: The invention concerns a method for increasing plant yield by introducing into a plant a cyclin A nucleic acid, preferably encoding a cyclin A protein, which cyclin A nucleic acid is operably linked to a seed-preferred promoter. By using this method, plant yield may be increased in optimal and sub-optimal growing conditions. The method results in plants having increased yield relative to corresponding wild type plants and relative to transgenic plants constitutively expressing cyclin A.
